

Filling Hose Kit Beer/Pre-Mix (1 pipe) Item N° RP1108

Kit includes:

- Beverage Hose SK 021.037, 7 mm
- Quick Disconnect Coupler, black
- Fitting set st/steel 90° 7mm barb, R5/8", hexagon nut complete
- Snifter Valve 7/16", grey

Illustration of operation ▶

In addition to the Filling Hose Kit, you will need the following standard beverage industry equipment and supplies for serving Premix soft drinks or Beer:

- Premix Soft Drink / Beer KEG (filled) from bottler
- CO2 gas from local supplier
- Flash Chiller for Beer/Soft Drinks

Filling the Rocket Packs beverage container with application of the Filling Hose Kit:

In order to avoid the loss of carbonation (causing a flat drink) or over-carbonation (causing foaming) soft drinks & beer are transferred, under pressure of CO₂, from an industrial Soft Drink/Beer KEG over the flash chiller in to the Rocket Packs beverage tank.

Already if a stationary dispensing system is locally, you can use the Filling Hose Set (Item N° RP1108). This has to be attached simply to a line of the flash chiller.

Methodology:

- 1) Disconnect the black quick disconnect coupler on the dispensing hose and the grey quick disconnect coupler on the portable air pump from the beverage tank.
- 2) Before disconnecting the portable air pump, pump up the empty, closed Rocket Packs beverage container must be pressurized. Please operate hereto the portable hand pump approx. 20 times.
- 3) Connect now the black quick disconnect coupler form the Filling Hose Kit to the "OUT" valve of on the Rocket Packs beverage container.
- 4) Connect the grey snifter valve (comes with the Filling Hose Kit) to the "IN" valve on the Rocket Pack beverage container and enable the carbonated beverage to be transferred. See hereto image above.
- 5) Carbonated beverage will be forced into the "OUT" valve on the Rocket Packs beverage container by the pressure of flash chiller. When Rocket Packs beverage container is full, the snifter valve will "spit" clear beverage. (Note: If it spits foam. Allow the transfer process to continue until the foam is purged). Disconnect snifter valve and filling line.
- 6) Insert the Rocket Packs beverage container into the insulated backpack. Connect the black quick disconnect coupler on the dispensing hose "OUT" and the grey quick disconnect coupler on the portable hand pump "IN" to the Rocket Packs beverage container.
- 7) For further operating please watch instruction from the main Operating and Cleaning Instruction.
